GOVAWARD WAR ROOM LEGEND · 1/3

The main screen. Everything here updates every 30 seconds; nothing on it can place a real trade.

1. **Mode** — engine mode. **PAPER** = simulated money only.
2. **LIVE lock** — **LOCKED** unless the server's .env says `GOVAWARD_ALLOW_LIVE=yes`. Shows red **LIVE ARMED** if anyone unlocks it.
3. **Sniper** — **STANDBY**, or blinking **ARMED** 4:45–7:30 PM ET on weekdays while it reads war.gov every 5 min.
4. **DoD drop countdown** — time to the next weekday 5:00 PM ET contract release (clock on its left is ET).
5. **Sync** — seconds since the last refresh. **SYNC LOST** (red) = the dashboard cannot reach the server.
6. **Tape** — newest contacts scrolling: ticker or awardee · award · buyer · age. Hover to pause.
7. **Feed status** — one verdict per data source, from evidence (see page 3).
8. **DoD drop box** — each war.gov article checked: **READ** (n awards ≥ $50M), **BLOCKED**, or **PASTED**. If blocked: open it, select all, copy, paste, **Ingest**. Tick *dry run* to store awards without paper trades.
9. **Radar filters** — All · ticker-matched · Red/Orange · ≥ $500M · ≤ 7 days.
10. **Contact radar** — every award of the last ~75 days as a blip. How to read it: page 3.
11. **Living core** — the system's pulse. It only reacts to real changes: page 3.
12. **Contact** — the selected award: amount, award ÷ market cap, age (**likely priced in** after 7 days), buyer, contract, flags (IDIQ ceiling, modification, option). **Stage paper trade** needs two clicks.
13. **Target board** — ticker-matched awards ranked by award ÷ market cap, fresh ones (≤ 14 days) first. Click a row to select it.

GOVAWARD WAR ROOM LEGEND · 2/3

Scroll down: the event log, your paper account and the edge check.

14 **Pulse log** — every reaction with its ET time. Amber = new contact, orange = warning, red = problem, grey = system. On open it replays what arrived since you last looked.

15 **Paper book** — equity, cash, realized P&L, open/pending, win rate. **Approve / Reject** pending paper orders (two clicks). Simulated money only.

16 **Edge check** — does an award move the stock? Average return 1 and 5 trading days after an award, minus the defense ETF (ITA) and SPY. The bar is the 95% range; **not distinguishable from 0** = no proven edge yet.

GOVAWARD WAR ROOM LEGEND · 3/3

CONTACT RADAR

Slice (wedge)	who bought: Army · Navy/USMC · Air & Space · DLA/Logistics · MDA/DARPA/DoD · Space/Science · Homeland · Civilian
Distance from centre	age. Rings at 24H, 7D, 30D, 60D. Beyond 30D is shaded: history, almost certainly priced in.
Size	award dollars (log scale; $50M is the smallest dot).
Shape + colour	◆ RED diamond · ■ ORANGE triangle · ■ YELLOW square · ● WATCH circle — materiality, highest first
White outline	matched to a listed ticker (something you could actually trade).
Expanding bright ring	posted in the last 48 hours.
Comet from the rim	a **new** contact just arrived, flying in on its buyer's bearing; it flares where it lands.
Ring rippling outward	an event happened (colour = kind, as in the pulse log).
Brackets + dashed line	the contact you selected. Brightening as the sweep passes is only a highlight.

LIVING CORE

Always breathing	it is alive and connected; heartbeat about every 2.4 s.
Lobes toward a slice	award dollars from that buyer in the last 7 days; bigger lobe = more money.
Thin spike toward a slice	points at the contact you selected.
Surge toward a slice	a new contact from that buyer.
Surge, no direction	a system event: order staged, P&L changed, feed changed, sniper armed.
Faster heartbeat, quicker sweep	sniper armed; energy keeps building over the last 15 minutes before 5 PM ET.
Glitching	a feed broke, or war.gov blocked today's article.
Colour	amber = normal · orange = war.gov blocked (paste needed) · red = an active feed is down, or LIVE trading was unlocked
Grey and dim	the dashboard lost the server (SYNC LOST). It wakes when the server answers.

FEED VERDICTS

LIVE	fresh data proven by evidence (articles read, awards on file).
STALE	reachable, but the newest award is old.
DOWN	the source does not answer from the server.
BLOCKED	war.gov refused the article: paste it in the drop box.
PARKED	switched off on purpose (SAM.gov, USAspending); history kept.

OPEN IT

1 · On your PC, keep this window open:

```
ssh -L 8890:127.0.0.1:8890 -L 8055:127.0.0.1:8055 root@vmi3134862.contaboserver.net
```

2 · Browse to `http://localhost:8055`
3 · Any username; the password is on the VPS:

```
grep GOVAWARD_DASH_PASSWORD /root/govaward-alpha/.env
```

Old layout: `/classic`.

DAILY RHYTHM

DoD posts contracts about **5:00 PM ET**. From 4:45 to 7:30 PM ET the sniper reads the war.gov feed every 5 minutes; awards ≥ $50M fly in as comets. Only newly seen awards can stage a paper trade. LIVE trading stays locked unless you edit the server's .env yourself.

Screens captured from the live system on 2026-10-09 14:49 UTC. Regenerate: `docs/legend/legend_build.py`.
